

Precautions on use

1. Block disassembly

With ball retainers and a dustproof cover, normally the balls are prevented from falling out when block is removed from rail.

However, if obliquely insert rail into blocks or quickly assembled or disassembled, there is a risk for balls of falling out.

Please carefully assemble the linear guide or use plastic rails to assist.

2. Plastic rail installation

A plastic rail is equipped for individual block set. Please do not remove plastic rail whenever it is not necessary.

If plastic rail falls out and needs to be reinstalled, press the dustproof covers with fingers and install slowly to prevent balls from falling out due to misalignment of plastic rail.

Press the dust-proof covers and insert plastic rail in alignment.

Without pressing dust-proof covers or insert plastic rail obliquely.

3. Caution

- Parts may slide out if linear guide is put unevenly. Please be careful.
- Hitting or dropping linear guide could have huge effect on accuracy and lifespan even though appearance may remain intact. Please be careful.
- Do not disassemble linear guide as external objects may enter blocks and cause accuracy problem.

4. Lubrication

- Linear guide have been treated with anti-rust oil during production. Before use, wipe the rail and treat it with lubrication.
- Do not mix lubricating oil (grease) with different properties.
- After lubrication, move block back and forth for the length of three blocks long and repeat at least 2 times to ensure there is a grease file on rail.

5. Use

- The operating environment temperature should not exceed 80°C, and the maximum temperature should not exceed 100°C.
- Do not separate blocks from rail whenever it is not necessary. If you need to separate them, please use plastic rails to prevent steel balls from falling out.

6. Storage

- When storing blocks, rails or linear guide set, please be sure that anti-rust oil is well applied and product is well sealed as well as placed horizontally. Avoid humidity and high temperatures environment.

Common Application

Refer to following table for suitable application of different preload grade:

Preload grade	Requirement	Common Application
Standard clearance(A)	One axial movement, small vibration and impact, accuracy requirement is low	Conveyor Machine, Semiconductor Equipment, Stage Equipment, Press Machine, Welding Machine and other light movement equipments
Light Preload(B)	Equipment that requires light-load and high-precision.	Z-axis movement for industrial use, NC lathe, EDM, Precision XY platform, Vertical machine center, measurement instrument, material feeder or industrial robot
Medium Preload(C)	Equipment that requires high rigidity, large vibration and shock.	Machining centers, NC lathes, grinders, vertical or horizontal milling machines, boring machines, tool guides, heavy cutting machines.

Installation Illustration

1. Allowable tolerance of mounting surface

LSD series is an arc-shape, two-point contact design of linear guide. Its self-centering feature allows some tolerance on mounting surface without affecting the smoothness of linear motion. The allowable tolerance is indicated in following table:

Model	Allowable tolerance of parallelism P(μm)			Allowable tolerance of top and bottom S (μm)		
	Standard clearance(A)	Light Preload(B)	Medium Preload(C)	Standard clearance(A)	Light Preload(B)	Medium Preload(C)
LSD15	25	18	-	130	85	-
LSD20	25	20	18	130	85	50
LSD25	30	22	20	130	85	70
LSD30	40	30	27	170	110	90
LSD35	50	35	30	210	150	120

Note: The value in the table is the allowable value when the distance between the two linear guides is 500mm, and the allowable value is proportional to the distance between the two linear guides.

2. Height and Chamfer of Reference Edge

In order to ensure accurate installation of LSD Linear Guide, the contact space should not exceed the given figures in following table.

Unit : mm

Model	H	H1	H2	R(Max)
LSD15	4.5	2.7	5	0.5
LSD20	6	5	7	0.5
LSD25	7	5	7.5	1
LSD30	9	7	7	1
LSD35	11	7.5	9.5	1

3. Screw Tighten Torque

When installing linear guide, whether the screws are well tighten and surface is well contacted will affect accuracy significantly. Please refer to following table for tightening force to ensure a perfect installation.

Model	Screw size	Tighten Torque(N.cm)		
		Iron	Casting	Aluminum alloy
LSD15	M3	196	127	98
	M4	412	274	206
LSD20	M5	882	588	441
LSD25	M6	1370	921	686
	M6	1370	921	686
LSD30	M8	3040	2010	1470
	M8	3040	2010	1470
LSD35	M8	3040	2010	1470

4. Datum plane

- Datum plane for installation must be ground or finely milled to ensure accuracy.
- Both sides of Rail can be used as the datum plane.
- For multi-blocks on a rail, identification line on blocks should be put on the same side to ensure moving accuracy.

Lubrication method

When a linear guide is well lubricated, it can reduce wear and increase lifespan significantly. Lubrication has the following benefits :

- Reduces friction of the rollers and raceway to minimize wear.
- The grease film between contact surface can prevent roller fatigue.
- Prevent rust.

1. Lubrication Grease

Use the correct grade of lubrication. While lubricating, a grease gun can be used to pump grease into slider through the grease nipple on it. The suitable condition for lube is when working speed is under 60 m/min and not in cooling process.

•Nipple type

•Grease amount

LSD series linear guide is well lubricated with 'Shell Alvania grease S2' in factory. Customers are recommended to use identical or the same grade of lubricant. After lubrication, block needs to be moved back and forth at least three times for the length of three blocks and repeat at least twice. Check if the surface of rail is well covered by grease film.

Model	Grease amount for the first lubrication(cm ³)		Replenishment amount(cm ³)	
	Short type	Standard type	Short type	Standard type
LSD15	0.5	0.9	0.2	0.3
LSD20	1.1	1.8	0.4	0.6
LSD25	1.8	3.2	0.6	1.0
LSD30	2.9	4.5	0.9	1.4
LSD35	4.1	5.9	1.3	1.8

•Lubrication frequency

Although the linear guides are well lubricated at factory and retains grease well, frequent lubrication is still necessary to avoid undesirable wear. Recommended lubrication period is every 100km of movement or every 3~6 months. (Refer to table on the top for suggested amount)

2. Lubricating oil

Recommended oil viscosity for lubrication use is about 30 to 150 cst.

Lubrication oil is suitable for all kinds of load and impact application, but not for high temperature use due to its tendency of vaporization.

•Oil supply rate

Loss of lubrication oil is faster than lubrication grease. Pay attention to sufficiency of oil while using.

Model	Oil amount for the first lubrication(cm ³)	Feeding Speed(cm ³ /hr)
LSD15	0.3	0.1
LSD20	0.5	0.15
LSD25	0.6	0.2
LSD30	0.8	0.25
LSD35	0.9	0.3

3. Grease nipple/adaptor installation

- Grease nipple or adaptor can be installed in the two sides of block for manual or automatic lubrication based on customer's requirement.
- There are a secondary set of lubricating ports on the side of the block. When using, it is not recommended to use the side with datum line unless necessary.
- Lateral nipple installation is not recommended for flange type blocks. (The grease / oil nipple may interfere with block)
- If lateral lubrication is needed for above spec, please contact us for customization.

Accessory Order Code

L - P - AM6

① ② ③

① Accessory Code	L: Linear Guide Accessory			
② Nipple/adaptor Code	P: Nipple/adaptor			
③ Nipple/adaptor type	M4	M4 Nipple		
	AM6	M4 to M6	I type 	
			L type 	
	LM6	M4 to M6		
	M6	M6 Nipple		
	A01	M6 to PT1/8	I type 	
	AM8	M6 to M8		
	L01	M6 to PT1/8	L type 	
	LM8	M6 to M8		
	SM6	M6 Nipple		

•Adaptor

L-P-AM6	L-P-AM8	L-P-A01
 LSH15	 LSH35 LSH30 LSH25 LSH20	 LSH35 LSH30 LSH25 LSH20
L-P-LM6	L-P-LM8	L-P-L01
 LSH15	 LSH35 LSH30 LSH25 LSH20	 LSH35 LSH30 LSH25 LSH20

Note: After installation, the top surface of adaptor may be higher than block. Be careful about the interference while moving.

Hole plug

1. Plug type

In order to prevent metal swarf or external objects from entering blocks and affecting precision and lifespan, customers must put plugs into holes during installation. Every rail is equipped with default plugs.

Model	Bolt	Diameter(D)(mm)	Thickness(H)(mm)
LSD15	M3	6.15	1.2
	M4	8.15	1.1
LSD20	M5	9.65	2.5
LSD25	M6	11.4	2.5
LSD30	M6	11.4	2.5
	M8	14.4	3.5
LSD35	M8	14.4	3.5

2. Plug installation Steps

Step one

Place the plug in counterbore.

Step two

Place the flat piece on mounting hole, hit the piece vertically with a plastic hammer and fix the plug into counterbore.

Note :

- Please make sure the plugs do not protrude the rail surface.
- After installation, please clean the surface before use.
