B3S SCREW-DRIVE
B3W BELT-DRIVE

LINEAR SOLUTIONS MADE EASY

Tolomatic B3S & B3W Electric Rodless Actuators

The Power to Move Heavy Loads

The B3S and B3W electric rodless actuators have very large moment and load carrying capacities. The sealed recirculating ball bearing design makes it an excellent choice for challenging environments. For even higher capacity (loads up to 3,629 kg.) choose the Dual 180° Carrier and add an auxiliary carrier. Both actuators utilize a patented internal re-circulating ball bearing guidance system that provides extremely long life. These actuators are capable of carrying loads up to 3,629 kg [8,000 lbs].

A COMPARISON OF SCREW DRIVE ACTUATORS

	B3S	MXE-S	MXE-P	TKS
Features:	High load and bending moment capacities	Basic guidance and support	High load and bending moment capacities	Superior rigidity, high moment load capacities
Load up to: (with options)	35.6 kN [8,000 lbf]	4.6 kN [1,040 lbf]	11.5 kN [2,584 lbf]	6.7 kN [1,500 lbf]
Thrust up to:	12 kN [2,700 lbf]	19.1 kN [4,300 lbf]	19.1 kN [4,300 lbf]	14.5 kN [3,260 lbf]
Speed up to:	1.5 m/sec [60 in/sec]	1.5 m/sec [60 in/sec]	1.5 m/sec [60 in/sec]	1.5 m/sec [60 in/sec]
Stroke Length up to:	4.5 m [179 in]	4.5 m [178 in]	4.5 m [178 in]	2.4 m [96 in]
Screw/Nut Type	Solid & Ball	Solid & Ball	Solid & Ball	Solid & Ball

B3S RODLESS SCREW DRIVE ACTUATOR

• ENDURANCE TECHNOLOGYSM

Endurance Technology features are designed for maximum durability to provide extended service life.

The B3S rodless screw-drive electric actuator is designed for carrying moderate to heavy loads with large bending moment capacity. The B3S utilizes an integral recirculating ball bearing guidance system that provides durable performance and extremely long life. Choose from multiple screw technologies for thrust up 12 kN [2,700 lbf]. Built-to-order in stroke lengths up to 4.5 m [179 inches].

Tolomatic™...MAXIMUM DURABILITY

EXCELLENCE IN MOTION

•SCREW SUPPORT BEARINGS•

- Unique high thrust bearing assembly design eliminates runout and isolates the linear forces from the drive shaft

•LIGHTWEIGHT ALUMINUM DESIGN•

- Black anodized extrusion design is optimized for rigidity and strength
- External switch channels on both sides allow easy placement and adjustment of position indicating switches

RECIRCULATING BALL BEARING SYSTEM

- 
- Unique design incorporates hardened steel raceways integral to the aluminum extrusion
 - Bearing surfaces are adjusted at the factory for optimum preload and smooth performance
 - Recirculating ball bearing system provides guidance, high efficiency and durability

•MOTOR ORIENTATION•

YOU CAN CHOOSE:

- Inline option directly couples the driving shaft and is typically a one-piece housing construction for optimum alignment and support of the motor
- Reverse-parallel option minimizes the overall length and offers a belt reduction drive with a 1:1 or 2:1 ratio

•YOUR MOTOR HERE•

YOU CAN CHOOSE:

- Specify the device to be installed and actuator ships with proper mounting hardware
- Specify and ship your device to Tolomatic for factory installation
- Motor or gearbox supplied and installed by Tolomatic

OPTIONS

CARRIER OPTIONS

- AUXILIARY CARRIER** doubles the load capacity and increases pitch and yaw bending moment capacities

- DUAL 180° CARRIER** doubles the load capacity, increases roll and yaw bending moment capacities and offers a wide mounting platform

MOUNTING OPTIONS

- SURFACE MOUNT** two t-slots are integral on the entire underside of the actuator body for direct mounting

- TUBE SUPPORTS** provide intermediate support of the actuator body throughout long stroke lengths

- MOUNTING PLATES** provide intermediate support of the actuator body throughout long stroke lengths

•METRIC OPTION

Provides metric tapped holes for mounting of load to carrier and/or actuator to mating surfaces

•SWITCHES

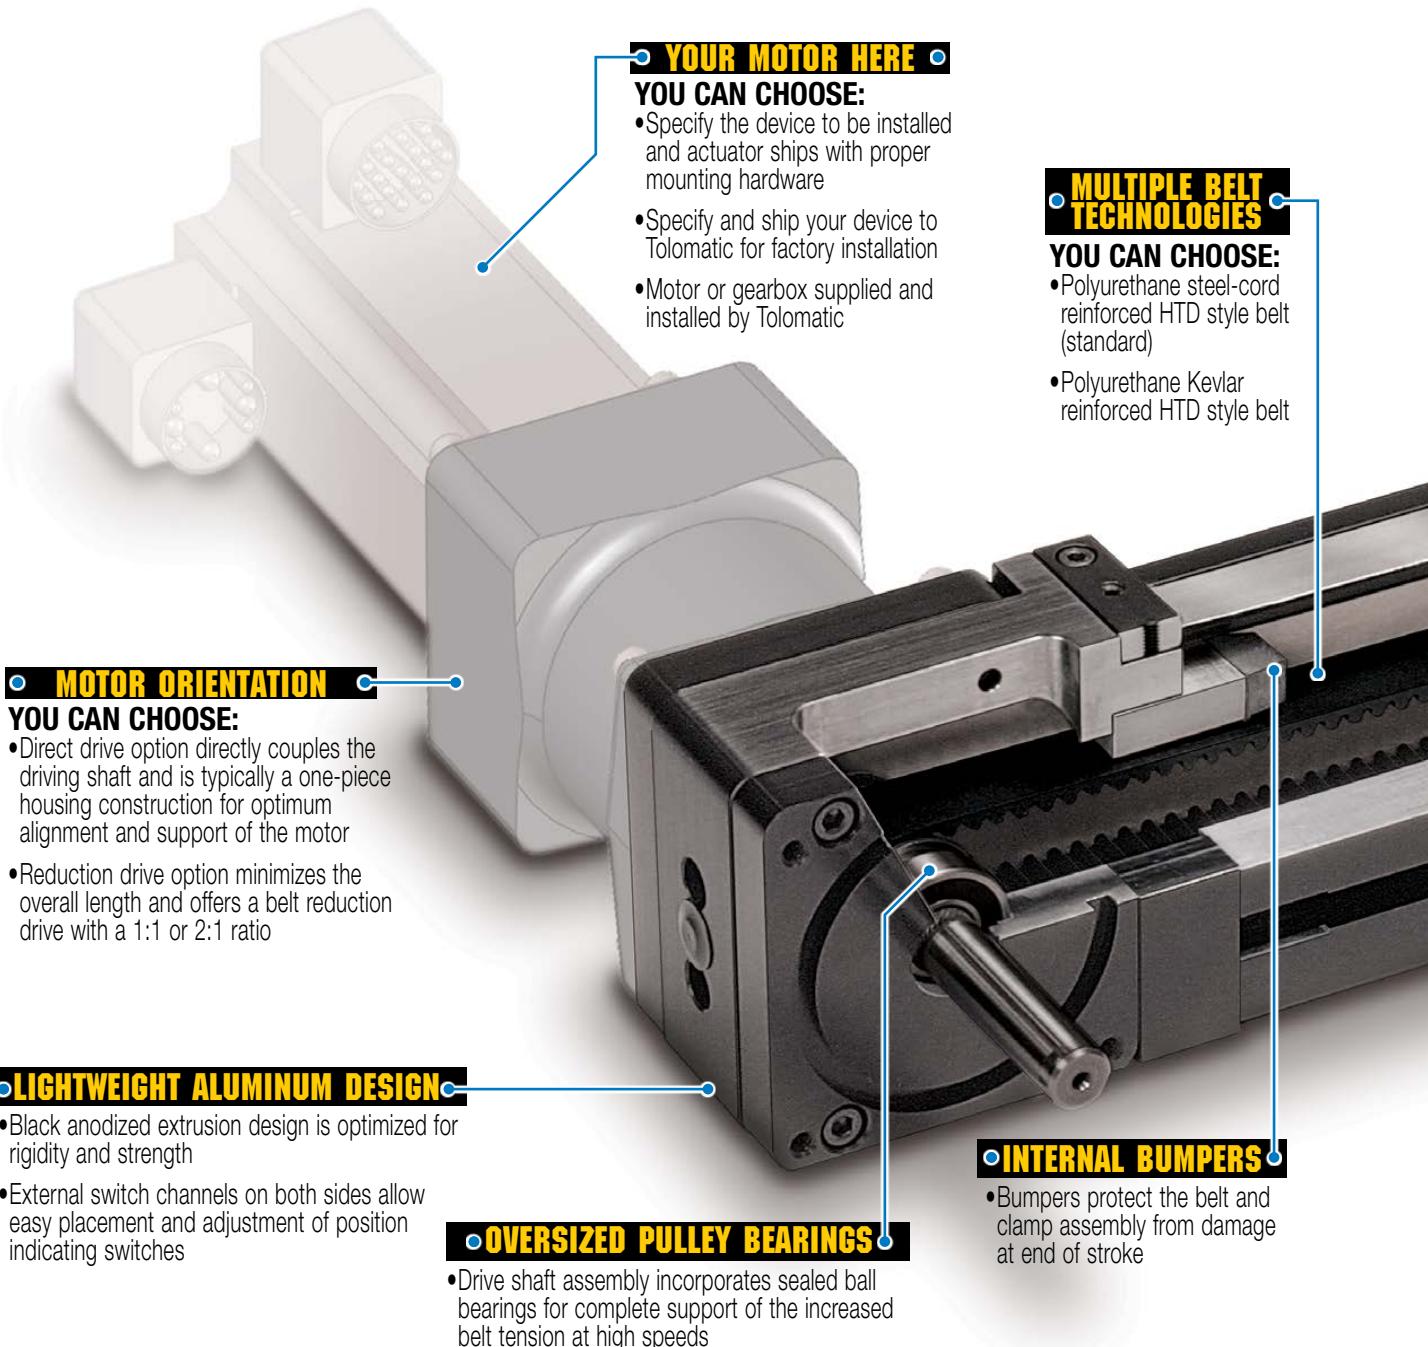

Styles include: reed, hall-effect or triac. Select either 5 m potted cable with flying leads or 150 mm to quick-disconnect coupler with mating 5 m cable

B3W RODLESS BELT-DRIVE ACTUATOR

•ENDURANCE TECHNOLOGYSM

Endurance Technology features are designed for maximum durability to provide extended service life.

The B3W rodless belt-drive electric actuator is designed for carrying moderate to heavy loads at moderate to high speeds with large bending moment capacity. The B3W utilizes an integral recirculating ball bearing guidance system that provides durable performance and extremely long life. The B3W belt-driven actuator features speeds up to 5.1 m/sec [200 in/sec]. Built-to-order in stroke lengths up to 5.3 m [207 inches].

RECIRCULATING BALL BEARING SYSTEM

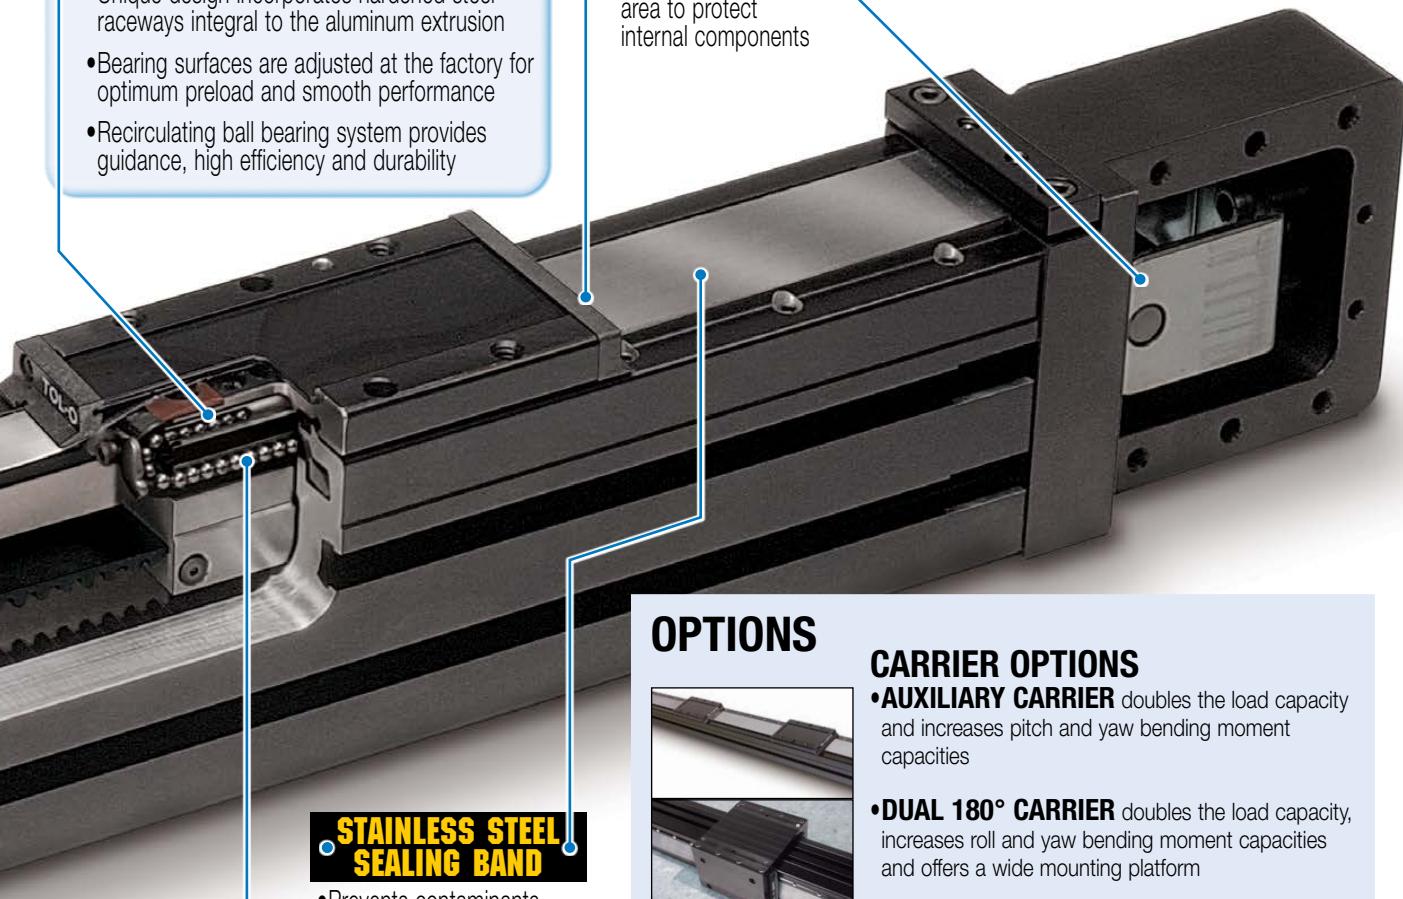

- Unique design incorporates hardened steel raceways integral to the aluminum extrusion
- Bearing surfaces are adjusted at the factory for optimum preload and smooth performance
- Recirculating ball bearing system provides guidance, high efficiency and durability

FORMED END CAP WIPERS

- Prevent contaminants from entering the sealing band area to protect internal components

BELT TENSIONING SYSTEM

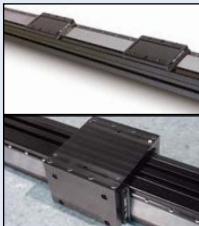

- Full access to the idle pulley allows ease of adjustment for alignment and tensioning
- Dual adjustment screws and field tensioning kit provide simple maintenance

OPTIONS

CARRIER OPTIONS

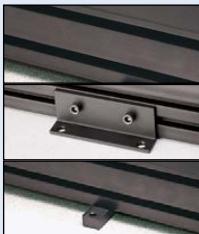

- **AUXILIARY CARRIER** doubles the load capacity and increases pitch and yaw bending moment capacities

- **DUAL 180° CARRIER** doubles the load capacity, increases roll and yaw bending moment capacities and offers a wide mounting platform

MOUNTING OPTIONS

- **SURFACE MOUNT** two t-slots are integral on the entire underside of the actuator body for direct mounting

- **TUBE SUPPORTS** provide intermediate support of the actuator body throughout long stroke lengths

- **MOUNTING PLATES** provide intermediate support of the actuator body throughout long stroke lengths

METRIC OPTION

Provides metric tapped holes for mounting of load to carrier and of actuator to mating surfaces

SWITCHES

Styles include: reed, hall-effect or triac. Select either 5 m potted cable with flying leads or 150 mm to quick-disconnect coupler with mating 5 m cable

AUXILIARY CARRIER: Increases rigidity, load-carrying capacity and moments 	Size Mx Moment (Roll) *(N·m : lb-in) My Moment (Pitch) *(N·m : lb-in) Mz Moment (Yaw) *(N·m : lb-in) Fy Load (Radial) (N : lb) Fz Load (Lateral) (N : lb) Minimum Dimension 'D' (mm : in)	10 57	15 194	20 376	10 500	15 1,718	20 3,324
DUAL 180° CARRIER: Allows 90° rotation of load, adds load bearing surface 	Size Mx Moment (Roll) (N·m : lb-in) My Moment (Pitch) (N·m : lb-in) Mz Moment (Yaw) (N·m : lb-in) Fy Load (Radial) (N : lb) Fz Load (Lateral) (N : lb)	10 74	15 279	20 512	10 657	15 2,468	20 4,527
AUXILIARY DUAL 180° CARRIER: Substantially increases moment and loads 	Size Mx Moment (Roll) *(N·m : lb-in) My Moment (Pitch) *(N·m : lb-in) Mz Moment (Yaw) *(N·m : lb-in) Fy Load (Radial) (N : lb) Fz Load (Lateral) (N : lb) Minimum Dimension 'D' (mm : in)	10 149	15 558	20 1,023	10 1,314	15 4,936	20 9,054

The Dual 180° carrier requires its own proprietary tube supports and foot mounts. See dimensional information. Breakaway torque will also increase when using the Auxiliary carrier or the Dual 180° carrier options. When ordering, determine working stroke and enter this value into the configuration string. Overall actuator length will automatically be calculated.

Deflection Considerations: In applications where substantial Mx or My moments come into play, deflection of the cylinder tube, carrier and supports must be considered. The deflection factors shown in the Load Deflection charts on the following page are based on cylinder mounted with tube supports at minimum recommended spacing. If more rigidity is desired, refer to the Auxiliary or Dual Carrier options.

*Loads shown in table are at minimum "D" dimension, for ratings with longer "D" dimension see graphs on page B3-10.

Life of the actuator will vary for each application depending on the combined loads, motion parameters and operating conditions. The load factor (L_f) ratios for each application must not exceed a value of 1.5 (see formula at right). Exceeding a load factor of 1.5 will diminish the actuator's rated life.

$$L_f = \frac{M_x}{M_{x_{max}}} + \frac{M_y}{M_{y_{max}}} + \frac{M_z}{M_{z_{max}}} + \frac{F_y}{F_{y_{max}}} + \frac{F_z}{F_{z_{max}}} \leq 1.5$$

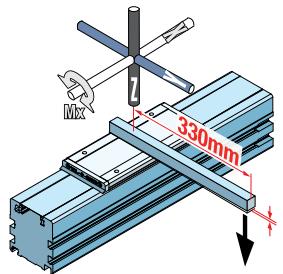

With combined loads, L_f must not exceed the value 1.5

B3S & B3W Electric Rodless Actuators

SPECIFICATIONS both Screw & Belt Drive

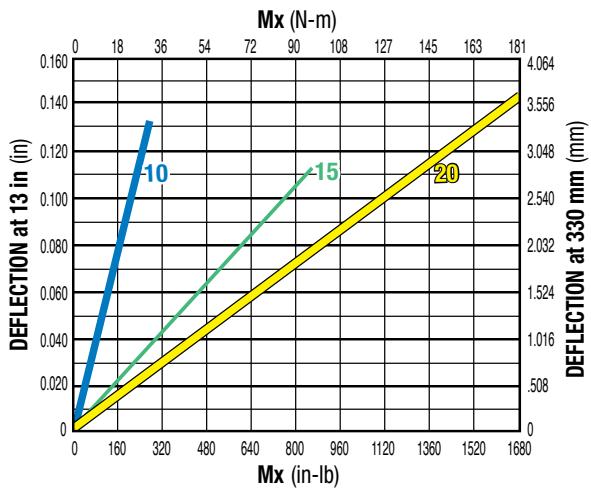

LOAD DEFLECTION

DEFLECTION ABOUT X AXIS

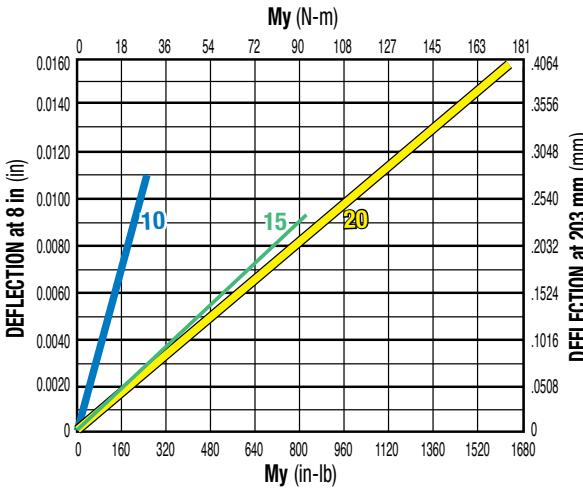

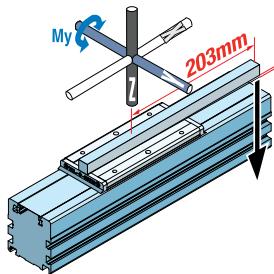

DEFLECTION TESTING WAS DONE UNDER THESE CRITERIA:

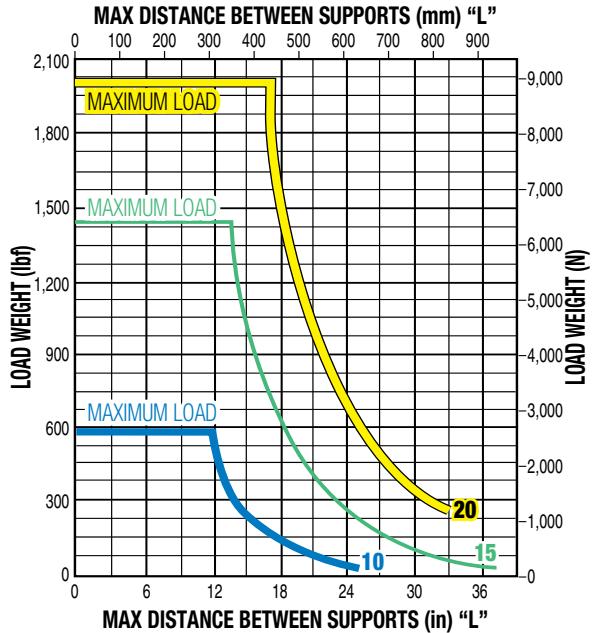

- 1.) Actuator was properly mounted with distance between supports within recommendations (see Support Recommendations below)
- 2.) Deflection was measured from center of carrier as shown ($M_x = 330\text{mm}$, $M_y = 203\text{mm}$)

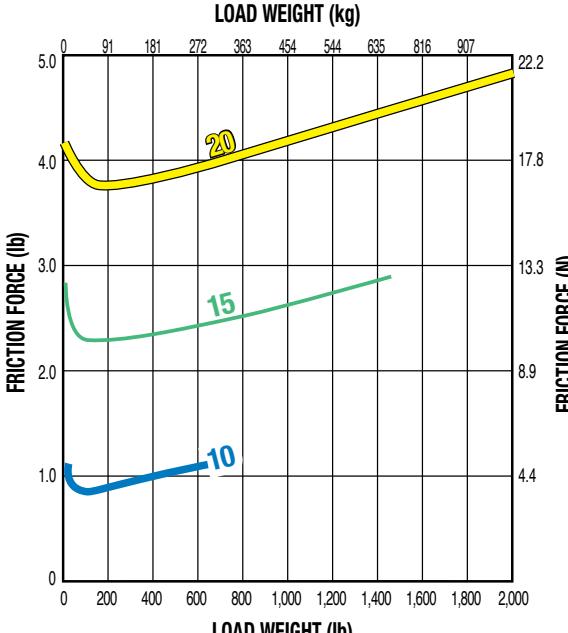

DEFLECTION ABOUT Y AXIS

SUPPORT RECOMMENDATIONS

FRICITION FORCE

SPECIFICATIONS both Screw & Belt Drive

AUXILIARY CARRIER: BENDING MOMENT AT 'D' DISTANCE

AUXILIARY DUAL 180° CARRIER: BENDING MOMENT AT 'D' DISTANCE

Rates shown on both graphs were calculated with these assumptions:

- 1.) Coupling between carriers is rigid.
- 2.) Load is equally distributed between carriers.

- 3.) Coupling device applies no misalignment loads to carriers.

* Customer must specify Dimension "D" (Distance between carrier center lines) when ordering.

Life of the actuator will vary for each application depending on the combined loads, motion parameters and operating conditions. The load factor (L_F) ratios for each application must not exceed a value of 1.5 (see formula at right). Exceeding a load factor of 1.5 will diminish the actuator's rated life.

$$L_F = \frac{M_x}{M_{x_{\max}}} + \frac{M_y}{M_{y_{\max}}} + \frac{M_z}{M_{z_{\max}}} + \frac{F_y}{F_{y_{\max}}} + \frac{F_z}{F_{z_{\max}}} \leq 1.5$$

With combined loads, L_F must not exceed the value 1.5

B3S20	2.15	14.38	0.88		44

¹The listed values relating to straightness/flatness are intended for reference purposes only, and not as an engineering standard of absolute tolerance for a given actuator. Appropriate installation is the single most important factor in reducing such deviation, so good engineering practices such as measurement, mapping, etc. must be employed in applications with stringent straightness/flatness requirements.

²Heat generated by the motor and drive should be taken into consideration as well as linear velocity and work cycle time. For applications that require operation outside of the recommended temperature range, contact the factory.

³ Protected against ingress of solid particles greater than .039 in (1mm)

and splashing water.

* "L" is maximum distance between supports— See the support recommendation graph on page B3_9.

LARGE FRAME MOTORS AND SMALLER SIZE ACTUATORS:
Cantilevered motors need to be supported, if subjected to continuous rapid reversing duty and/or under dynamic conditions.

METRIC ACME SCREW

INCH (US Conventional) ACME SCREW

* Maximum thrust is the maximum continuous dynamic thrust subject to Thrust x Velocity Limitation.

PV LIMITS: Any material which carries a sliding load is limited by heat buildup. The factors that affect heat generation rate in an application are the pressure on the nut in pounds per square inch and the surface velocity in feet per minute. The product of these factors provides a measure of the severity of an application.

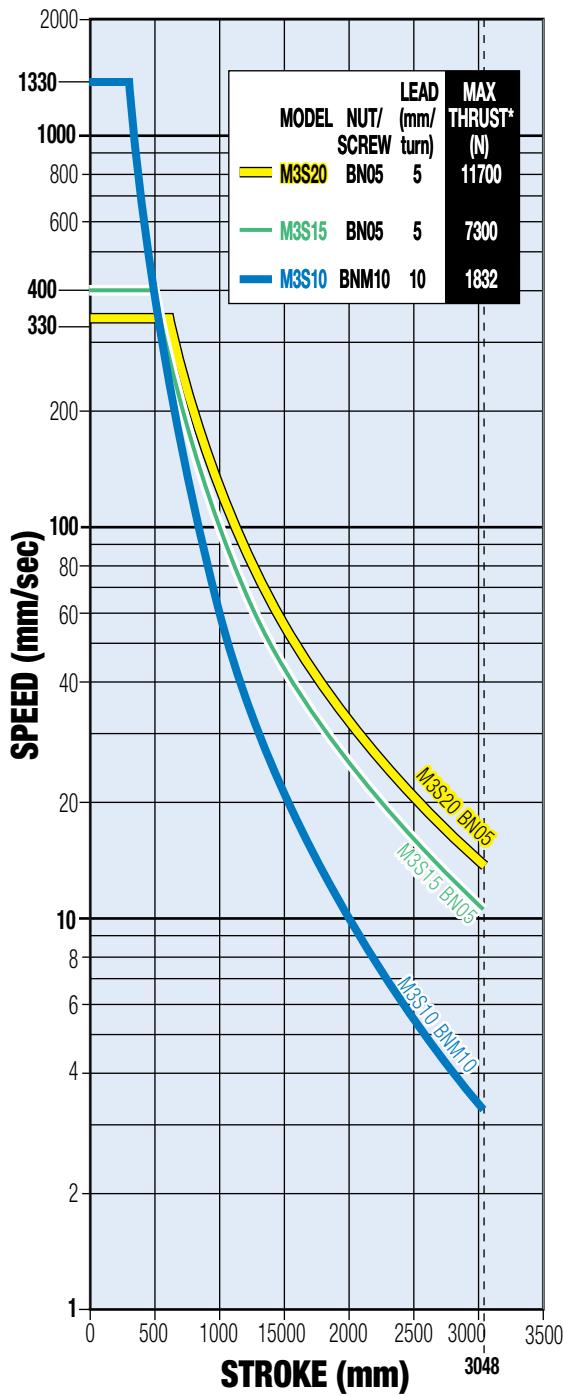

$$\left(\frac{P}{\text{Thrust} / (\text{Max. Thrust Rating})} \right) \times \left(\frac{V}{\text{Speed} / (\text{Max. Speed Rating})} \right) \leq 0.1$$

SELECTION GUIDELINES

The process of selecting a load bearing actuator for a given application can be complex. It is highly recommended that you contact Tolomatic or a Tolomatic Distributor for assistance in selecting the best actuator for your application.

The following overview of the selection guidelines are for educational purposes only.

1 CHOOSE ACTUATOR SIZE

Choose an actuator that has the (A) thrust, (B) speed and (C) moment load capacity to move the load. **A.** Max Thrust: B3S see page B3_11; B3W see page B3_25

B. Max. Speed: B3S see critical speed graphs page B3_13 to B3_15; All B3W sizes = 200 in/sec (5m/sec). **C.** Moment & Load B3S & B3W see page B3_8

2 COMPARE LOAD TO MAXIMUM LOAD CAPACITIES

Calculate the application load (combination of load mass and forces applied to the carrier) and application bending moments (sum of all moments M_x, M_y, and M_z applied to the carrier). Be sure to evaluate the magnitude of dynamic inertia moments. When a rigidly attached load mass is accelerated or decelerated, its inertia induces bending moments on the carrier. Careful attention to how the load is decelerated at the end of the stroke is re-

quired for extended actuator performance and application safety. If either load or any of your moments exceed figures indicated in the Moment and Load Capacity table (page B3_8) for the actuator consider:

- 1) Higher capacity bearing style
- 2) A larger actuator size
- 3) Auxiliary carrier
- 4) External guide system

3 CALCULATE LOAD FACTOR LF

For loads with a center of gravity offset from the carrier account for both applied (static) and dynamic loads. The load factor (L_F) must not exceed the value of 1.5.

$$L_F = \frac{M_x}{M_{x_{max}}} + \frac{M_y}{M_{y_{max}}} + \frac{M_z}{M_{z_{max}}} + \frac{F_y}{F_{y_{max}}} + \frac{F_z}{F_{z_{max}}} \leq 1.5$$

If L_F does exceed the value of 1.5, consider the four choices listed in step #2.

4 ESTABLISH YOUR MOTION PROFILE AND CALCULATE ACCELERATION RATE

Using the application stroke length and maximum carrier velocity (or time to complete the linear motion), establish the motion profile. Select either triangular (accel-decel) or trapezoidal (accel-constant speed-decel) profile. Now calculate the maximum acceleration and deceleration rates of the move.

For the B3S Acceleration/deceleration should not exceed critical speed (page B3_13) for the screw/nut combination chosen. **For the B3W** acceleration/deceleration should not exceed 1200 in/sec² (30.48 m/sec²). Also, do not exceed safe rates of dynamic inertia mo-

ments determined in step #3.

adapter clearance.

5 SELECT THE LEAD SCREW (B3S ONLY)

Based on the application requirements for accuracy, backlash, quiet operation, life, etc. select the appropriate lead screw type (Acme screw with a solid nut or ball screw with a standard or anti-backlash nut) and the pitch (lead). For additional information on screw selection, consult "Which Screw? Picking the Right Technology" (#9900-4644) available at www.tolomatic.com.

8 CONSIDER OPTIONS

- Choose metric or inch (US Conventional) load mounting. (When ordering use **SK** for inch)
- Switches - Reed, Solid State PNP or NPN, all available normally open or normally closed

Use the Tolomatic Sizing & Selection Software or call Tolomatic at **1-800-328-2174**

6 SELECT MOTOR (GEARHEAD IF NECESSARY) AND DRIVE

To help select a motor and drive, use the sizing equations located in the Engineering Resources section [ENGR_] of the Tolomatic Electric Products Catalog (#3600-4609) to calculate the application thrust and torque requirements. Refer to Motor sections to determine the motor and drive.

7 DETERMINE TUBE SUPPORT/ MOUNTING PLATE/ T-NUT REQUIREMENTS

- Consult the Tube Support Requirements graph for the model selected (page B3_9)
- Cross reference the application load and maximum distance between supports
- Select the appropriate number of tube supports, T-nuts or mounting plates and requirements for motor and

ACTUATOR SIZING

www.tolomatic.com

The Tolomatic Difference Expect More From the Industry Leader:

INNOVATIVE PRODUCTS

Unique linear actuator solutions with Endurance Technology™ to solve your challenging application requirements.

FAST DELIVERY

The fastest delivery of catalog products... Built-to-order with configurable stroke lengths and flexible mounting options.

ACTUATOR SIZING

Online sizing that is easy to use, accurate and always up-to-date. Find a Tolomatic electric actuator to meet your requirements.

YOUR MOTOR HERE

Match your motor with compatible mounting plates that ship with any Tolomatic electric actuator.

CAD LIBRARY

Easy to access CAD files available in the most popular formats to place directly into your assembly.

TECHNICAL SUPPORT

Extensive motion control knowledge: Expect prompt, courteous replies to any application and product questions from Tolomatic's industry experts.

Also Consider These Other Tolomatic Products:

Electric Products

Rod & Guided Rod Style Actuators, High Force Actuators, Screw & Belt Drive Rodless Actuators, Motors, Drives and Controllers

"Foldout" Brochure #9900-9074

Pneumatic Products

Rodless Cylinders: Band Cylinders, Cable Cylinders, Magnetically Coupled Cylinders/Slides; Guided Rod Cylinder Slides

"Foldout" Brochure #9900-9075

Power Transmission Products

Gearboxes: Float-A-Shaft®, Slide-Rite®, Caliper Disc Brakes; Planetary Roller Screws

"Foldout" Brochure #9900-9076
